

L-42- Valuation Basis (Life Insurance)

Reliance Nippon Life Insurance Company Limited (formerly known as Reliance Life Insurance Company Ltd)

Registration with IRDA : 121 dated 03 January 2002

VALUATION BASIS FOR THE YEAR ENDED 31st MARCH, 2019

A Chapter on Valuation basis covering the following minimum criteria.

a. How the policy data needed for valuation is accessed.

The policy details under Individual and Group policies are maintained in the policy administration system. The details of the policies as at 31st March 2019 were frozen and backed-up after the close of the business.

b. How the valuation basis are supplied to the system

Majority of the policy liabilities under Individual Par and Individual Non Par Business (excluding unit liabilities and accumulation account) are valued using PROPHET actuarial software. Valuation basis are fed to this software using tables. A small proportion of the policy liabilities are valued using the excel spreadsheets. The valuation basis is supplied in the excel template.

4) **Bonus Rates:**

Policy liabilities under Par Business are valued using bonus rates consistent with the current experience and expected investment yields. Current Reversionary bonus rates vary between 1.8% and 5.5%. Future reversionary bonus rates are consistent with the valuation interest rate.

5) **Policyholders Reasonable Expectations:**

Most of the company's business relates to unit linked and non-par business. Under both these segments the policy benefits are not under the discretion of the company. The expectations of policies under Par Business is allowed through provision of future bonus in line with the current experience.

6) **Taxation and Shareholder Transfers:**

Tax Rate	14.56%
Shareholder Share of Profits:	
(i) Par Business	10%
(ii) Non Par Business	100%

7) **Basis of provisions for Incurred But Not Reported (IBNR):**

For Individual business, IBNR is calculated as higher of

- 1 . Total claims paid during last six months for Non linked business and total of last six months mortality charges collected for Linked business; and
- 2 . Amount calculated using Chain ladder method.

For Group Non-Linked Business, provision for IBNR reserve has been held using Chain Ladder Method and for Group Linked Business total of last six months mortality charges collected.

*The assumptions for Group Business, as given above, are used for computing reserve using cash flow method (known as Gross Premium Valuation). The reserve, however, for group business is taken as higher of reserve computed using unearned premium method (UPR) and cash flow method. No assumptions are required for calculating reserves using UPR method.
