*CAGR: Compounded Annual Growth Rate

Indian economy

GDP growth was robust at 8.8% y-o-y in Jan-March quarter, underpinned by strong growth in construction and investment, though slower than the +9% growth recorded in the first two quarters of FY08. Full year FY08 GDP growth estimate was revised to 9% from 8.7%, taking up the average annual growth rate for the last five years to 8.8%.

IIP growth over the last few months showed volatility, reflecting the impact of monetary tightening over the last one year. Output in March fell to a shocking 3% y-o-y rate before later being revised to 3.9%. April growth however was better at 7% but much slower than the growth rates registered in the last fiscal.

Surging oil import bill pushed India's current account into a deficit of \$1.04 billion in the Jan-March quarter as against a \$4.25 billion surplus a year ago. The deficit was 1.5% of GDP in FY08. Oil imports surged 88.9% in the quarter as per DGCI&S data. Trade deficit in May hit a record high of \$10.8 billion with exports growth hitting a 14-month low of 12.9% y-o-y, reflecting the impact of a slowing global economy. Despite the slowdown in IIP and exports growth, direct tax collections showed an increase of 38.61% in the Apr-June quarter.

Outlook:

GDP for FY09 is expected to be in the range of 7.50% to 8.00%, lower than 9.00% for FY08 owing to high interest rates, double digit inflation and global slowdown in demand.

Debt markets:

Bond markets were extremely volatile under the weight of crude prices, inflation and tight cash conditions. The yield curve rose by over one percent at several tenors and extreme short-term uncertainty resulted in the curve turning inverted till the medium-term segment. Ten-year yield ended at 8.69% from 7.93% and its spread above the 1-year ended at -51 bps from +40 bps.

WPI inflation rose to 13-year peaks of 11.63% y-o-y from 7.71% in March, even as the government imposed fiscal measures and the RBI used monetary tools repeatedly in the attempt to cut inflationary expectations. RBI raised the LAF repo rate to 8.5% from 7.75% and CRR to 8.75% from 7.5% during the quarter. Petrol/diesel were raised by 10%.

Owing to higher rates and persistent FII divestments, the money market experienced continued cash deficit. Macro indicators showed slowing growth momentum but that did not aid bonds.

Fiscal deficit in the first two months of the fiscal was Rs 732 bln or 54.9% of the annual target in just two months of the fiscal. FM Chidambaram said that the fiscal deficit at the end of the year would remain within the 2.5% of GDP target thanks to robust tax collection.

Outlook:

With inflation in double digits, yields are expected to harden further. Liquidity is expected to remain tight owing to CRR hikes taking effect and also auction outflows in July. The ten-yr benchmark g-sec yield may remain in the range of 8.75% to 9.50%.

Equity markets:

BSE Sensex fell 13.95% to 13461.60 and NSE Nifty fell 14.66% to 4040.55 as selling pressure gathered steam after the market had come off record peaks in January. Sharp rise in inflation, political uncertainty and tighter monetary policies triggered selling activity in the stock market. FIIs were net sellers worth Rs 14032.50 crore of Indian equities, up from net sales worth Rs 11432.80 crore in the Jan-March quarter. MF activity was however positive with MFs being net buyers worth Rs 3403.40 crore from Rs 3134.40 crore.

Domestic data (IIP etc) continued to show a slowing trend, showing the impact of monetary policy while exports data also showed that global slowdown was hitting growth of exports. Major sectoral indices like BSE realty (-39.86%), power (-29.39%) and capital goods (-28.04%) bore the brunt of selling. Banking sector scrips also fell to 23.34%.

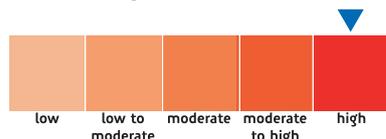

Outlook:

We believe that going ahead, equity markets in the near term may shift focus to the earnings season which are around the corner. With the sharp fall, our outlook is that valuations are slowly becoming attractive. However, tough macro economic environment comprising of high crude prices and rising interest rates will continue to weigh on the sentiments in the near term.

fund objective

Provide high real rate of return in the long-term through high exposure to equity investments, while recognizing that there is significant probability of negative returns in the short-term. The risk appetite is 'high'.

fund manager's report

The month of June saw markets losing momentum. The negative trend was influenced by weak global sentiments. The markets witnessed huge selling by the FIIs. The holding in equities was kept at 71.28%.

The fund has 5.11% exposure to gilts, 12.24% exposure to corporate bonds which is marginally higher than 11.83% in the previous month. A 11.37% exposure to short term assets like CDs and MFs has been maintained to take advantage of higher yields in these instruments.

fund manager's report

The month of June saw markets losing momentum. The negative trend was influenced by weak global sentiments. The markets witnessed huge selling by the FIIs. The holding in equities was kept at 43.42%.

The allocation to gilts was at 10.24%, similar to the month of May. Allocation to short term assets was marginally up to 18.50% from 17.91%. Allocation to corporate bonds was increased slightly to 27.85% from 25.78% in May due to attractive yields in corporate bonds

fund manager's report

The month of June saw markets losing momentum. The negative trend was influenced by weak global sentiments. The markets witnessed huge selling by the FIIs. The holding in equities was kept at 17.70%.

The allocation to gilts at 16.68% and to corporate bonds at 36.02% was similar to the previous month's allocation. The allocation to short-term bank deposits and mutual funds was increased slightly to 29.60% from 25.05% in the previous month, owing to higher yields in these instruments. The portfolio is at the desired asset allocation with these changes. However we propose to buy gilts and bonds as and when attractive opportunities are available

NAV as on June 30, 2008

Reliance Money Guarantee Plan (MGP) - Return Shield Option: Rs. 10.7283

Reliance Secure Child Plan (SCP) - Return Shield Option: Rs. 10.1220

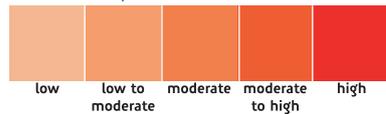

growth of initial investment of Rs. 10,000 in MGP

fund objective

Provide returns that exceed the inflation rate, without taking any credit risk (sovereign risk only) and maintaining a low probability of negative return in the short-term. The risk appetite is 'low to moderate'.

fund risk profile

products & inception dates

Reliance Automatic Investment Plan (AIP) - Gilt Fund Option: May 28, 2007

Reliance Wealth + Health Plan (WHP) - Gilt Fund Option: Feb 27, 2008

Reliance Total Investment Plan Series I (TIPS I)-Gilt Fund Option: Mar 19, 2007

Reliance Total Investment Plan Series II (TIPS II)-Gilt Fund Option: Mar 19, 2007

Reliance SuperInvest Assure Plan (SIP)-Gilt Fund Option: Jun 12, 2008

fund manager's report

The allocation to gilts was around 65%, slightly lower than that of the previous month. The allocation to short term assets like Bank FDs, CDs and MFs was around 35% of the portfolio. As the fund faces volatile flows, a higher percentage of cash has been kept.

the analyst expressions

Gross Fund Return

This is the return calculated on an NAV basis plus the fund management fees which are debited periodically to the fund. We calculate gross fund returns in order to give uniformity while evaluating fund management performance as the fund management fees vary from company to company.

Benchmark Return

A benchmark is a standard against which the investment performance of a fund can be measured. Benchmarks are pre-determined primarily on the basis of the asset allocation structure of the fund. Benchmarks can be readily available in the market or have to be constructed. The CNX Nifty is a readily available benchmark for our equity portfolio manager as the equity fund primarily invests in equities.

Fund Standard Deviation

Risk of investing in a fund is identified by the volatility of the fund's periodic returns. Standard deviation measures the volatility of the fund's returns. Standard deviation for a particular time period gives us the deviation from the mean returns for that fund during that period. Higher the standard deviation greater is the volatility and therefore, greater is the risk of investing in that fund.

Fund Sharpe Ratio

Sharpe Ratio of a fund tells us how much return the fund has been able to generate per unit of risk. The higher the Sharpe Ratio, the better the performance of a fund from the risk point of view.

The excess return generated by a fund for a particular time is first calculated by subtracting the risk free rate from the rate of return generated by that fund. Dividing this result by the standard deviation of the fund return, one can obtain the Sharpe Ratio.

Benchmark Sharpe Ratio

Just as fund returns are compared to a benchmark return, the Sharpe Ratio of the fund is also compared to the Benchmark's Sharpe Ratio in order to evaluate the risk-adjusted performance.

Modified Duration of Debt Portfolio

Modified Duration indicates the sensitivity of the value of the debt portfolio to any given change in interest rates. Modified duration represents a weighted average of the time periods to maturity. The weights for each time period are equal to the present values of the cash flows in each time periods. Modified duration gives one a 'rule of thumb' – the percentage change in the price of a bond is the duration multiplied by the change in interest rates.

Fund Beta

Beta measures the risk of a security (say a particular stock) in relation to its broad market. The broad market is generally defined as the specified as the specified benchmark index. The beta assigned to the benchmark index is 1. Beta of the stock describes the sensitivity of the price of the stock to the benchmark index. The fund beta is the sum of the weighted individual stock betas in the portfolio.

- ✓ Macro Analysis
- ✓ Appreciation of Market Dynamics
- ✓ Meeting Investment Objectives vis-à-vis Risk Appetite
- ✓ Asset Allocation Strategy
- ✓ Security Selection – Portfolio Construction
- ✓ Benchmarks
- ✓ Risk Management/ Portfolio Evaluation/ Diagnostics
- ✓ Governance and Processes

Macro analysis of the economy is carried out by tracking the trends in key economic indicators.

Market dynamics are also studied apart from the above to determine our view of the changes likely in the interest rate scenario and equity market movements. Price movements in the market are monitored at all times along with factors that affect them such as the prevailing market sentiments, cash flows in the market and views/actions of key market participants including institutional investors like FIIs and mutual funds. For analyzing the debt markets, yield curve movements and changes in its shape are also studied.

The **risk appetite and investment objective** is clearly defined for each fund keeping in mind the investment horizon, liquidity requirements etc.

A range of acceptable holdings under each asset class is determined at the investment policy level. The **asset allocation** primarily takes into account, the investment objectives, regulatory issues and the likely risk return matrix to obtain a potential return which is the highest achievable for the risk that is assumed. Within the strategic asset allocation, the fund managers determine the weights of the various asset classes; primarily factoring in the developing market scenarios.

Based on the investment of objectives of each fund option, a rigorous **security selection** process is followed. The fixed income fund manager identifies cheaper securities across the yield curve and builds a basket of securities to arrive at the optimum level of yield within the range of pre-determined 'duration' for the entire portfolio after paying particular attention to the liquidity position and the liquidity premium on the securities. An active fund management style is followed or the equity portfolios. A core portfolio of stocks is first created driven by a top-down approach and a research based bottom-up stock selection method is followed.

Benchmarks are pre-determined for each fund based on the most appropriate indices available in the market or by constructing proxy benchmarks out of multiple indices. Performance of each fund is continuously tracked based on the benchmarks and recalibrated.

A statistical analysis is carried out to determine that the **risk levels** are in tune with the risk appetite of the particular fund. Statistical tools such as the standard tools such as the standard deviation and risk-adjusted return measures such as the Sharp ratio are calculated in order to compare the returns generated per unit of risk vis-à-vis benchmarks.

The investment policy has been designed by the **Board** to cover regulatory guidelines, the various product investment objectives, risk appetite strategic asset allocation and the investment style. It is ensured that the portfolio is always kept compliant with the relevant regulations. Our rigorous process and risk/compliance controls are well documented.
